

REPORT 6 - the Hole Overview page, builds v35 and v36

Fable, 2026-09-29, session "Latest build setup", at xhigh. Spec: docs/SPEC_hole-overview.md (revision 4). Three Opus jobs (6.1, 6.2, 6.3) and Fable's review of each. Nothing here is pushed or installed.

The harness refused a report file from a sub-agent on all three jobs ("Subagents should return findings as text, not write report files"). Opus returned its reports as text in the chat; this file is Fable's, written from those returns and from Fable's own checks. Where a number is Opus's and Fable did not re-measure it, the row says so.

1. What he asked for, and where it is

His words (2026-09-28)	Built as	Build
"a "hole Overview" page I can toggle to"	MAP at the right end of the hole navigation row; PLAY in the same spot goes back. COURSE MAP on the home screen	v35
"approach distance (front center and back)"	GREEN F / C / B, in a YOU column (live GPS) and a TEE column (the tee box for the tee set)	v35
"lay up distances that I will add in later"	+ LAYUP: yards, LEAVES TO THE GREEN or FROM THE TEE, a label. Kept on the phone and in the export	v35
"bunker numbers (carry ideally)"	each bunker: reach (nearest edge) / carry (farthest point)	v35
"distance to the water and carry distance over water"	each creek crossing on holes 7, 11, 15, 16: reach / carry on his own line. Ponds: no number (his ruling 8)	v35
"add the carry number for the creek off 15 tees and the carry number for the creek on 16 should always be displayed"	fixed line under the top bar: hole 15 CREEK CARRY BLUE 255 · GOLD 223, hole 16 CREEK CARRY BLUE 477 (your mark) · GOLD 415 (his rulings 17 to 19)	v35

2. Commits, in order

Job	Commit	What	Opus	Fable's verdict
spec	1273d84	the spec filed, revision 2	-	-
6.1	4f32556	Part A, the numbers	xhigh	PASS
6.1	fd382e0	Part B, the 18 pictures and their frames	xhigh	PASS
6.1	7105e97	Part C, his course notes (layup storage)	xhigh	PASS, correction C1 owed
merge	2d51b74	stage 1 onto build v34	Fable	suite 626 / 626
log	c2fb502	review rulings R1 to R6, spec Section 14	Fable	-
6.2	e7da1e6	Part E, hole 9's blue and gold tee boxes	xhigh	PASS
6.2	6cd2598	C1, a damaged notes key is copied once	xhigh	PASS
6.2	d6a74a3	Part D, the page	xhigh	PASS, corrections C2 and C3 owed
6.2	8f64b94	build v35	xhigh	PASS
6.3	1d52cd8	C2, one green on the screen	high	PASS
6.3	2659bcb	C3, the YOU column beside the picture	high	PASS
6.3	2bd29b5	build v36	high	PASS

3. Suite, 360 x 728

Tree	Count	Whose run
v33, 1273d84	594 / 594	Opus, n = 1
stage 1 merged onto v34, 2d51b74	626 / 626	Fable, n = 1
Part E	627 / 627	Opus, n = 1
C1 test before the fix	627 / 628, the new test RED	Opus, n = 1
C1	628 / 628	Opus, n = 1
Part D	641 / 641	Opus, n = 2
v35, 8f64b94	641 / 641	Fable, n = 1; Opus, n = 2

Tree	Count	Whose run
C2	644 / 644	Opus, n = 1
C3 test before the fix	644 / 645, RED on hole 16 row B1 ("B1 ends at 739.8")	Opus, n = 1
v36, 2bd29b5	645 / 645	Fable, n = 1; Opus, n = 1

No test is left RED.

4. The numbers against Fable's prototype

Check	Result	Whose
Table 1, what is numbered, 18 holes	exact: 25 bunkers, 5 creek crossings (n = 30)	Opus
Table 2, holes 1 to 8 and 10 to 18, blue and gold: box reach, green F / C / B, reach / carry	every value equal, largest difference 0 (n = 34 tee rows)	Fable's own run of the engine
Hole 9 after Part E: blue 496 / 513 / 530, B1 472 / 480, B2 493 / 511; gold 457 / 473 / 490, B1 432 / 440, B2 454 / 473	equal (n = 2 tee origins)	Opus
The rendered page, simulated GPS: hole 16 blue, hole 11 blue, hole 1 blue TEE columns	equal to Table 2 (n = 3 holes)	Fable
Hole 7, 300 yd down the hole, on the line and 30 m either side: W1 59 / 97, 35 / 74, 84 / 116	equal, ownLine true (n = 3)	Opus, in the suite

5. The pictures (Part B)

Pillow 12.3.0, libwebp 1.6.0, WebP quality 80, 0.30 m per px. 18 files in `img/veenker/`, 1,433,580 bytes (prototype 1,432,152). Widths 518 to 1,046 px, heights 779 to 2,092 px. One frame slides (hole 5, 3 m). A re-run is byte-identical. Fable drew holes 7 and 16 with the map's outlines through `framePx`: creek, greens, bunkers and fairways sit on the photo (n = 2, by eye).

6. Part E, the generator

`veenker.js` changed on 4 lines: sets of box 1065750754 (blue) and 199289144 (gold); `inputsSha256.corrections a7d42e0b...` to `d92c92b2...`; `inputsSha256.markup_lines faa8e10e...` to `6e4f5466...` (ruling R3: the generators hash text inputs with CRLF read as LF). Read by Fable in the diff. The 18 images came out byte-identical.

7. Fable's review of v35, and the corrections in v36

#	Seen at 360 x 728, simulated GPS, round on hole 16	Correction, built in v36
C2	Page on HOLE 11 read YOU GREEN 140; the play screen's line above it read GREEN 321 with hole 16's par and card. Page on HOLE 1: GREEN 152 under GREEN 209 (n = 2 holes)	While the page shows a hole the round is not on, the play screen's GREEN line and par-and-card title are hidden and keep their space; the sub line ends ROUND IS ON HOLE 16. <code>screen-play.js</code> unchanged
C3	With the LOCK tab's column reserved the YOU column fell under the picture; on hole 16 its last row ended at 739.8, below the 728 fold	With the column reserved the YOU column sits beside the picture (picture 96 px, YOU 144 px). Last YOU row bottom: hole 11 423.3, hole 15 441.2, hole 16 429.8 (Opus, n = 1 each)

C3 does not change his phone. The native app never turns the LOCK tab on (`js/app.js` 160: `if (shell()) return; before pocketLock.enable()`); his word, 2026-09-16, the power button is the lock). On the phone the page has the side-by-side layout in v35 and v36 alike. Measured by Fable with the strip's class removed, hole 16: picture [12, 259, 150, 300], YOU column [172, 259, 176, 161], YOU row bottoms 319 to 421, TEE column [172, 431, 176, 103], layouts from 573 (n = 1). C3 matters on the web build only.

8. The APK, v36

Item	Value	Whose
Path	<code>android/tracker/app/build/outputs/apk/debug/app-debug.apk</code>	-
Size, written	9,958,707 bytes, 2026-09-29 06:17:21	Fable

Item	Value	Whose
sha256	ac74fd72fedd3fef706ff11f7dcad5f058d570c1f3caeb2c66ddad3e98c55186	Fable
Version	versionName v36, versionCode 3601	Fable, output-metadata.a.json
assets/js/data/build.js	id: 'v36', date: '2026-09-29'	Fable
Web files inside against the repo at 2bd29b5	38 text files (js, css, index.html) equal by sha256 with CRLF read as LF; 18 pictures equal byte for byte; no js/dev/	Fable

Not installed. adb devices on 2026-09-29 listed emulator-5554 only; the phone was not attached.

9. Readings Opus made, accepted by Fable

1. Separators are the app's own: • and ±, as the play screen's GREEN line.
2. The creek line breaks after the blue number and its (your mark).
3. A tee layup shows on every tee set as 150 from BLUE; it gets a point and a YOU number only on its own tee set.
4. The page opens from the hole navigation row down; the HUD stays above it (with C2 when looking at another hole).
5. On the green the YOU row reads ON THE GREEN, as the play screen does.
6. RESTORE after a delete reads his notes from storage, so it works after PLAY.
7. The fifth layup rejection is a label over 24 characters (ruling R1).

10. Not proven, and said so

- Nothing here has run on his phone. The page has not been used on the course.
- The YOU column was checked on simulated GPS only.
- The layup sheet was exercised by Opus and the suite; Fable did not type a layup by hand.
- The pictures were checked by eye on 2 of 18 holes by Fable, 3 by Opus.

11. Follow-ups logged, not built

1. Hole 11's three greenside bunker markers overlap on the small picture; they are clear with the picture filled.
2. The Round menu stays reachable while the page is open and acts on the play screen under it.
3. The Android back key leaves the app from the page (logged 2026-09-26, his call).
4. js/app.js's storage-error toast says "Could not save to this device." for a failed read; the page has its own words for his notes (R6), the export does not.
5. docs/course-map/veenker/check_answers.py rewrites the corrections file from scratch and would drop hole 9's blue and gold ids.
6. mapTeeBox (screen-play.js) and teeOrigin answer the same question; one function should serve both.
7. A "to the pin" row on the page, from the pin sheet (spec follow-up 5).
8. On the web build the pocket lock comes up after about 10 s without a touch while the page is open, and the play screen's GREEN line does not repaint while locked. Not on the phone: the native app has no pocket lock.

12. Cost

Run	Model, effort	Time	Sub-agent tokens
6.1, Parts A, B, C	Opus, xhigh	37 min	408k
6.2, Parts E, C1, D, F	Opus, xhigh	cut by a network error, resumed; time of the first leg not recorded	583k
6.3, C2, C3, v36	Opus, high	16 min	208k

n = 1 each. Weekly Fable, account-wide with other sessions live: 92 percent at the session's first read and 93 percent 3 minutes before the 2026-09-28 17:00 Central reset; 4 percent at 05:51 on 2026-09-29. Effort xhigh from the first

message to this sign-off.
