

REPORT 5.2 - D1 corrections and Part B, the PIN SHEET sheet: build v34 (Opus a7e0b58) and Fable's review

2026-09-28. Spec: docs/SPEC_hole-position.md Sections 9 and 12. Built by Opus at xhigh from 6f843ea; one run, 16:44 to 17:12 CDT, 28 min and 426k sub-agent tokens by the harness count (n = 1). Filed by Fable from Opus's hand-back. Sections 1 to 6 are Opus's findings; Section 7 is Fable's review at xhigh.

1. What changed

File	Change
js/round/hole-position.js	The constant OFF_HOLE_MARGIN_M = 91.44.
js/round/round.js	shotGeometry. C3: a source: 'map' tee has lengthM null in every case; his typed distance still sets toHoleM. C8: a distance measured from a mark is refused when it is more than hole.yards x 0.9144 + 91.44 m; the entry has no distance and carries offHoleM; lengthM unchanged; no hole.yards, no filter.
js/analysis/strokes-gained.js	offHoleM passed through; the reason for a refused shot reads "hole N shot k: the mark is n yd from the hole on a m yd hole, not used". Formula, categories, benchmarks untouched.
js/ui/screen-summary.js	C4: the third line has two forms; n is the count of scored holes whose first shot read map-green. A PIN SHEET button under EDIT / ADD HOLES, only with a map.
js/ui/screen-play.js	openPinSheet(); Pin sheet in the Round menu after "Mark cup", live and in edit mode, only with a map; params.pinSheet opens it; the UNDO banner shows in edit mode for the pin sheet's save; the green sheet's "Where was the pin?" block is gated on no map. Nothing else in the green sheet changed.
css/base.css	.pin-sheet: one-line rows, 48 px fields and buttons, a sticky SAVE, a two-line row when the web lock tab's strip is reserved.
js/data/build.js, sw.js	v34 in both. REVISION untouched.
test/run.js, test/index.html	Tests C3, C4, C8 and the seven pin sheet tests; one existing fixture moved to holes 1, 4 and 5 because C8 correctly refuses its 388 yd tee on hole 2 (card 283).

2. The tests

All ten new tests fail against the modules at 6f843ea (594/604, exactly these ten).

Test	What it proved
C3	A map tee with a typed 150 yd: 150 yd, source yards, no length. At 6f843ea the length was 247.8 m.
C4	Scorecard tees only: the "total does not depend on it" sentence. Two track tees and a map tee: "and so does the total on the 2 holes whose tee shot was measured to it".
C8	A tee mark 3,905 yd from the green on a 419 yd hole: no distance, offHoleM set, length unchanged, 1 unattributed with the ruled reason, sources.unknown 1. The same mark 500 yd out is measured.
Pin 1	Veenker's Round menu opens the sheet, rows in the order played; Radcliffe has no entry; the summary's PIN SHEET opens edit mode with the sheet up.
Pin 2	12 / L / 5 on hole 1 and SAVE stores exactly { onPaces: 12, side: 'L', sidePaces: 5, sideFrom: 'edge', paceFeet: 2.75, enteredAt } (stride set to 2.75 to prove it comes from his settings). ON 0, 61, 7.5 and side 31 are not accepted. No other hole, cup, shot, green entry or completedAt is written.
Pin 3	An empty ON clears the key.
Pin 4	One UNDO restores every hole, live and in edit mode; a hole that had no key has none again.
Pin 5	The read-out warns ("30 on is off the green on the map - check the numbers", "lands 7 yd off the green on the map - check the numbers") and SAVE still stores what he typed.
Pin 6	The green sheet has no "Where was the pin?" on Veenker and has it on Radcliffe; the rest is the same on both.
Pin 7	360x728: 18 rows, no sideways scroll, every number field at least 44 px, SAVE on screen at both ends of the scroll.

Suite: 604/604 at 360x728.

3. Before and after, every Veenker round in the phone's store

Read only. Cells read 1692724 / v33 / this build; one value means all three agree.

Round	Holes	Unattributed	Off tee	Approach	Short game	Putting	Total	C8 refused
09-09 21:41	1	1	-0.225	-0.359	-0.024	0.000	-0.608	0
09-09 22:09	5	2	-0.461	-2.603	-0.708	-0.009	-3.781	0
09-11	3	4	+0.064	-0.950	-1.405	+0.627	-1.664	0
09-14	9	2	-1.657	-1.980	-1.199	-0.063	-4.898	0
09-16	9	5	-1.833	-4.763	+0.571	+0.230	-5.795	0
09-23	3	2	+0.977	0.000	0.000	-0.504	+0.473	0
09-26 14:51 (abandoned)	1	0 / 0 / 2	-1.000 / -1.001 / 0.000	0.000 / +8.043 / 0.000	+0.170 / 0.000 / 0.000	-0.947	-1.778 / +6.094 / -0.947	2
09-26 17:48	1	0	-0.583	-2.788	+1.727	0.000	-1.644	0
09-27	8	9 / 7 / 7	-3.700 / -1.750 / -1.750	+0.331 / +5.122 / +5.122	+1.936 / -0.598 / -0.598	+0.678	-0.755 / +3.452 / +3.452	0

- C8 refuses 2 shots, both on the abandoned 09-26 14:51 round (3,905 and 3,906 yd on a 419 yd hole). The +8.043 is gone. n = 9 rounds.
- The store has 0 map tees and 0 pin sheets, so C3 moves nothing stored.
- Only 09-27 shows the green-centre line, in the "total on the 8 holes" form.
- Trends read 09-14 and 09-16 only, both unchanged.

4. The sheet at 360x728

Measure	Native shell, no lock tab	Web, with the lock-tab strip
ON and side fields	48 tall x 61.9 wide	48 tall x 91 wide
L / C / R buttons	41.4 x 48	59.3 x 48, on their own line
Row height	60.7 px	112.7 px
Rows above the fold	6 full	3 full
SAVE	sticky at the foot, always on screen	same

5. Where the spec was silent (Opus's choices)

1. C4 with n = 1 says "hole", singular.
2. A new row defaults to side C, the side field disabled until L or R.
3. The read-out warns when the pin cannot be placed or lands more than 3 m off the green: the same line the engine uses.
4. A row he did not change keeps its stored entry, paceFeet and enteredAt included.
5. SAVE with nothing changed writes nothing and shows no banner.
6. The UNDO banner shows in edit mode for the pin sheet only; every other edit-mode mark behaves as before.
7. C8 applies on every course that has a card yardage.

6. Follow-ups Opus noticed, not fixed

1. An end-of-hole row still prints a distance for a track stop farther than the card plus 100 yd, which the engine refuses after SAVE HOLE.
2. The shot list does not say a shot was refused by C8.
3. Edit mode hides every UNDO banner except the pin sheet's.
4. The green sheet still reads the track on a map course, though the pin control is hidden there.
5. The pin sheet row does not say when a marked cup on that hole outranks it.
6. The number fields' refusal of "." and "-" is proven from code only; it has not been tried on the phone.
7. test/README.md has no D1 row.

7. Fable's review (xhigh), 2026-09-28

Check	Result
round.js, strokes-gained.js, hole-position.js	Read line by line against Section 12: C3 and C8 as ruled.
screen-summary.js	Read: C4's two sentences and the condition as ruled.
screen-play.js, css/base.css	The sheet opened and typed into by Fable at 360x728: 18 rows, depth per hole, "7 yd from the centre" on 12 / L / 5 at hole 10, the warning on 30 on at hole 11 (18 deep), SAVE sticky, no sideways scroll (scroll width 360).
Must-not-touch list (Section 10)	10 files changed, none on the list; schema.js, track-analysis.js and trends.js untouched by this build. REVISION untouched. v34 in both files.
Suite	604/604 at 360x728, Fable's run, n = 1.
The "this build" column of Section 3	Recomputed by Fable from the phone's store: 9 of 9 rounds equal to 3 decimals; 2 shots refused, both on 09-26 14:51.
Commit identity	rusty9645@gmail.com.

Verdict: PASS. D1 is built: Part A, its corrections and Part B.

Not proven, and said so: the pin sheet has never been typed from a real tournament sheet against a marked cup; the side numbers are built as paces from the nearer side edge and he has not confirmed that convention; nothing in v31 to v34 has run on his phone.

Not installed, not pushed. The deploy is handed to the session "Latest build setup" on his word (docs/handoff/HANDOFF_2026-09-28_shot-places-and-D1.md).
